ABSTRACT

Average salary increases for 625 faculty in the field of library and archival science are reported for 1982-1983 and 1985-1986, as part of the College and University Personnel Association's annual faculty salary studies. Included are comparative data for 108,074 faculty at 174 public colleges and 193 private colleges, representing 41 academic disciplines. In 1982, 40 public and 19 private colleges reported on library and archival science faculty salaries, while 42 public and 18 private colleges reported in 1985. Between 1982 and 1985, average salaries of faculty in this field increased 19.7% at public colleges and 19.3% at private colleges. The average salary for library and archival science faculty was below the average faculty salary in the other 40 disciplines (10% below for public colleges and 20% below for private colleges). Included is information on: the number of faculty by academic rank, including new assistant professors; salaries by academic rank; the ratio of average salaries to total average salaries of all public and private colleges in both years studied; comparisons between the 2 years and with the Consumer Price Index of changes in cost-of-living; and comparisons with 40 other disciplines. The disciplines and participating institutions are listed. (SW)

SALARY-TREND STUDY OF FACULTY IN LIBRARY & ARCHIVAL SCIENCE FOR THE YEARS 1982-83 AND 1985-86

Richard D. Howe and Allen Antone

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, D.C., in cooperation with Appalachian State University in Boone, North Carolina, has conducted annual national faculty salary studies by discipline and rank each year through 1985-86. Each year two separate studies are conducted, one for public senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, D.C., and the other for private senior colleges and universities. The list of private institutions is provided by the American Council on Education in Washington, D.C.

Salary data for each study were collected and tabulated for full-time teaching faculty in 41 selected academic disciplines including library and archival science. The disciplines were chosen from among those defined by the Higher Education General Information Study (HEGIS) Taxonomy and by A Classification of Instructional Programs (CIP), 1981. The definition of the discipline/major field of library and archival science in the CIP is as follows:

> A summary of groups of instructional programs that describe the knowledge and skills required to develop, organize, store, retrieve, administer, and facilitate the use of collections of information in such formats as books, documents, manuscripts, machine-readable data bases, filmed and recorded materials, specimens, and artifacts.

This article presents a summary of the overall average salary increases in the discipline/major field of library and archival science from the "baseline year" of 1982-83 to and including the "trend year" of 1985-86 for both public and private institutions. Of the 227 institutions which participated in CUPA's

HE 019 754

"PERMISSION TO REPRODUCE THIS MATERIAL HAS BEEN GRANTED BY
Richard D. Howe
Appalachian State Univ
TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)."

PUBLIC (AASCU) study of 1982-83, 174 also participated in 1985-86. Data from those same 174 institutions were used in both the baseline year and the trend year. Of the 299 institutions which participated in CUPA'S PRIVATE study of 1982-83, 193 also participated in 1985-86. Data from those same 193 institutions were used in both the baseline year and the trend year.

In addition to listing the average salaries in library and archival science for both public and private participating institutions by rank, including "new assistant professor," and listing the faculty mix percentage (FAC MIX PCT) and the salary factor, comparisons are made between the two studies for each of the two study years (1982-83 and 1985-86) and with the CPI (Consumer Price Index) of changes in cost-of-living.

The CPI is based on prices of food, clothing, shelter and fuels, transportation, medical care, entertainment, and other goods and services that people buy for day-to-day living. In examining trends in faculty salary it is important to consider any changes in the economy and the CPI yields a more precise representation of "real" salary increases over time.

The salary is based on a nine- or ten-month academic year salary of full-time faculty only. It does not include any faculty members teaching less than 51 percent. Salary for summer academic work, fringe benefits, and perquisites are not included in the salary data. The average salary is based on the study information with the assumption that all employees were full-time. The average salary displayed is an average of all faculty salaries reported for a given rank and discipline.

The "NUM" means the number of faculty members whose salaries were included to compute the average salary.

The "N/IN" means the number of institutions that reported salary data for a given academic rank and discipline/major field.

The FAC MIX PCT is the percentage of faculty in a given discipline/major field who hold a given academic rank. For example, a FAC MIX PCT factor of .32 for associate professor of library and archival science in the 1982-83 public study means that 32 percent of the faculty in that discipline/major field hold the rank of associate professor.

The SALARY FACTOR for a given rank of a given discipline/major field is the ratio of the average salary to the total average salary of all institutions in each of the four studies: PUBLIC 1982-83, PUBLIC 1985-86, PRIVATE 1982-83 and PRIVATE 1985-86. For example, a SALARY FACTOR of .98 for assistant professors in the discipline/major field of library and archival science in the 1982-83 public study means that their salaries are 2 percent lower than the average of all assistant professors in all institutions in that study.

NEW ASST PROF is the grouping of assistant professors who were hired for the first time in the fall of the study year (1982-83 or 1985-86). All information for this group was included in the ASST PROF group for reporting purposes. This group is used mainly for new hiring information.

ALL MAJOR FIELDS is the entire data base for all 41 disciplines/major fields in each of the four studies. It is used to compare, among other things, the discipline/major field of library and archival science with the entire data base for each study.

Of particular import to the reader is noting the size of the sample on which each percentage or dollar value is based. The smaller the number in the group, the greater the effect of extreme scores on a descriptive statistic such as the average. It should be noted also that any large disparity in the sample sizes between the "baseline year" of 1982-83 and the "trend year" of 1985-86 will lessen the reliability and validity of any conclusions that one might make based on a simple comparison of averages.

RESULTS OF THE TWO PUBLIC (AASCU) STUDIES, 1982-83 AND 1985-86

In the PUBLIC 1982-83 salary study in the above table, the reader may note that the discipline/major field of library and archival science was reported in 40 of the 174 public (AASCU) institutions. The average salary of the 247 faculty was $23,727. This average salary was approximately 10 percent (0.90) lower than the average salary of $26,376 for all 35,137 faculty in ALL MAJOR FIELDS in the 1982-83 public study.

In the PUBLIC 1985-86 salary study in the above table, the discipline/major field of library and archival science was reported in 42 of the same 174 public (AASCU) institutions. The average salary of the 253 faculty was $28,402. This average salary was about 10 percent (0.90) lower than the average salary of $31,610 for all 39,815 faculty in ALL MAJOR FIELDS in the 1985-86 public study.

The increase in average salaries for all faculty in library and archival science after three years in the public institutions studied was 19.7 percent ($28,402 minus $23,727 equals $4,675). The CPI of increased cost-of-living between October 1982 and October 1985 was 10.7 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 9.0 percent or 3.0 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the public institutions studied was 19.8 percent ($31,610 minus $26,376 equals $5,234). In comparison to the discipline/major field of library and archival sciences (19.7%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 0.1 percent (19.8% minus 19.7% equals 0.1%) more than faculty in the discipline/major field of library and archival science.

The reader may note that the faculty mix percentage in the discipline/major field of library and archival science is far less at the professor rank than at the assistant professor rank in the public studies; 0.13 vs. 0.46 (1982-83)

respectively; and 0.14 vs. 0.41 (1985-86) respectively. The differences in faculty mix percentage at the ranks of professor and assistant professor in ALL MAJOR FIELDS for both public studies is as follows: 0.33 vs. 0.27 (1982-83) and 0.36 vs. 0.26 (1985-86) respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors than library and archival science in both public studies.

Finally, the hiring rate of new assistant professors in library and archival science in the public studies was: 4.5 percent (11/247) in 1982-83 vs. 3.6 percent (1,268/35,137) in ALL MAJOR FIELDS in 1982-83. The hiring rate of new assistant professors in library and archival science in 1985-86 was 4.7 percent (12/253) vs. 3.9 percent (1,541/39,815) in ALL MAJOR FIELDS that same year. In other words the hiring rate in the discipline/major field of library and archival science was higher than for ALL MAJOR FIELDS in the public study of 1982-83 and the public study of 1985-86.

RESULTS OF THE TWO PRIVATE STUDIES, 1982-83 AND 1985-86

In the PRIVATE 1982-83 salary study in the above table, the reader may note that the discipline/major field of library and archival science was reported in 19 of the 193 private institutions. The average salary of the 68 faculty was $20,115. This average salary was approximately 20 percent (0.80) lower than the average salary of $25,213 for all 15,823 faculty in ALL MAJOR FIELDS in the 1982-83 private study.

In the PRIVATE 1985-86 salary study in the above table, the discipline/major field of library and archival science was reported in 18 of the same 193 private institutions. The average salary of the 57 faculty was $24,002. This average salary was about 20 percent (0.80) lower than the average salary of

$29,850 for all 17,299 faculty in ALL MAJOR FIELDS in the 1985-86 private study.

The increase in average salaries for all faculty in library and archival sciences after three years in the private institutions studied was 19.3 percent ($24,002 minus $20,115 equals $3,887). The CPI of increased cost-of-living between October 1982 and October 1985 was 10.7 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 8.6 percent or 2.9 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the private institutions studied was 18.4 percent ($29,850 minus $25,213 equals $4,637). In comparison to the discipline/major field of library and archival science (19.3%), therefore, the faculty in library and archival sciences increased their salaries by 0.9% percent (19.3% minus 18.4% equals 0.9%) more than faculty in ALL MAJOR FIELDS.

The reader may note that the faculty mix percentage in the discipline/major field of library and archival science is dramatically lower at the professor rank than at the assistant professor rank in the private studies: 0.06 vs. 0.47 (1982-83) respectively; and 0.16 vs. 0.40 (1985-86) respectively. This is very different than that of ALL MAJOR FIELDS for both private studies: 0.28 vs. 0.33 (1982-83) respectively; and 0.30 vs. 0.31 (1985-86) respectively.

Finally, the reader may note that the hiring rate of new assistant professors in library and archival science in the private studies was lower in comparison to the hiring rate in ALL MAJOR FIELDS in 1982-83, 1.5 percent (1/68) vs. 4.7 percent (739/15,823) respectively; but in 1985-86 the hiring rate of new assistant professors in library and archival sciences was higher than in ALL MAJOR FIELDS, 7.0 percent (4/57) vs. 4.9 percent (843/17,299), respectively.

CONCLUDING REMARKS

This article presented salary-trend information on the academic discipline/major field of library and archival science and compared that information with 40 other academic disciplines/major fields over a period of three years: the "baseline year" of 1982-83 and the "trend year" of 1985-86. Two studies, one for public (AASCU) institutions, and the other for private institutions were conducted for the baseline year and for the trend year--a total of four studies. A total of 625 faculty in the discipline/major field of library and archival science participated and were included in the overall total of 108,074 faculty in all 41 disciplines/major fields in all four studies. The same 174 public (AASCU) institutions and the same 193 private institutions in the United States participated in the baseline year and the trend year.

Although many interpolations and extrapolations of the data may be made, a few of the more important ones are as follows. First, the average faculty salary in the discipline/major field of library and archival sciences is currently (1985-86) 10 percent in the public study and 20 percent in the private study <u>below</u> the overall average faculty salary of the other 40 disciplines/major fields. Library and archival science average faculty salary in the private institutions lagged behind that of the public institutions in both the 1982-83 study and the 1985-86 study.

Second, the CPI of October 1985, in comparison to the CPI of October 1982, indicates that the faculty in library and archival science, in both the public and private institutions, received overall salary increases for three years above the cost-of-living. Library and archival science average faculty salaries in the public institutions lagged behind faculty in ALL MAJOR FIELDS during this same period by 0.1 percent, whereas library and archival science average faculty salaries in the private institutions increased by 0.9 percent in

comparison to faculty in ALL MAJOR FIELDS. Both library and archival science faculty in the public and private institutions have some catching up to do with their colleagues in ALL MAJOR FIELDS.

Third, in the discipline/major field of library and archival science the percentage of full professors in both the public institutions and the private institutions is consistently lower than the faculty mix percentage of ALL MAJOR FIELDS at the rank of professor. Both library and archival science faculty and faculty in ALL MAJOR FIELDS in the private institutions are being promoted at a faster rate than faculty in the public institutions, and it seems that a smaller percentage of new assistant professors are being hired in the public institutions.

Now that a rather significant data base on individual faculty member salaries has been developed, it is anticipated that additional salary-trend studies will be effected in the library and archival sciences, and in other disciplines/major fields, on an annual basis.

Richard D. Howe is the originator and director of the annual CUPA faculty salary studies. He is a professor of leadership and higher education, and history at Appalachian State University, Boone, North Carolina. Allen Antone is Head Reference Librarian at Belk Library at Appalachian State University.
